DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Applicant should elect one of the following:

- I. The polyamide described by formula (0) found in claims 40-46.
- II. The polyamide described by formula (A) in claim 47.
- III. The polyamide described by formulae (I) and (II) in claim 51-52.

If Applicant chooses species II, Applicant must further elect one of the following:

- a. The copolyamide represented by formula (B) in claims 48-49.
- b. The copolyamide represented by formula (C) in claim 50.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The following claim(s) are generic: 27-39.

2. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: Although each species is an instance of a polyamide, given that some species are directed toward aliphatic-based subunits and others are directed toward aromatic-based subunits, one of

Art Unit: 1794

ordinary skill in the art would reasonably expect them to behave differently. Given that each species is drawn to a polyamide which is not required in the other species, namely, species I is drawn to polyamide of formula (0), species II is drawn to copolyamide of formula (A) having a specific refractive index, and species III is drawn to polyamide blend of first polyamide of formula (I) and second semicrystalline polyamide of formula (II) where each polyamide is different from each other, the species do not share a special technical feature and therefore, the cited species lack unity of invention.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Other Matters

The examiner notes that Applicant cancelled claims 1-26. The pending claims still reference claims 1-26, however. Applicant is advised to clarify the dependencies of the claims.
